Urban Sociology

Code: KURBF2

# Urban Sociology II

## Introduction

Urban Sociology is a field with considerable popular appeal, with graduates in demand as government and industry advisers in dealing with urban problems

The field of Urban Sociology examines the problems and phenomena of cities in the context of related disciplines such as the study of race, community, bureaucracy etc.

It is a study of the various facets of social life in urban communities linking the social characteristics and activities of people with the home, neighbourhood and the physical environment in which urbanites live, which can and have been shaped and modified by planners, architects and engineers.

This collection of ninety volumes examines the historical origins, growth, characteristics and planning of our modern cities and explores all the civic, economic and cultural aspects of our urban-metropolitan society

Books contribute to our factual knowledge and understanding of the internal structures, the growth process and the external relationships of individual cities and urban societies in different time periods – notably the decades of the 20<sup>th</sup> Century

### Topics Covered Include
